Quick start guide

This guide relates to the following stylesheets:

Product: Strategi®

Data format: ESRI Shapefile

Stylesheet format: QGIS stylesheets (QML)

The stylesheets have been designed to work with the data as it is supplied

1   Either fork the stylesheets on GitHub or download them and navigate to the directory that matches your data format, stylesheet format and style preference.

2   Copy the font file 'StrategiSymbols.ttf' into your systems font directory (on Windows machines this is (C:\Windows\Fonts).

Your machine may require a restart for QGIS to recognise this new font.

3   Copy all the QML stylesheets (those files ending .qml) into the same directory as your Strategi ESRI Shapefile data.

**4**   Load your Strategi data into QGIS and it should appear pre-styled.

Alternatively you can load each style individually through the 'Layer Properties'window within QGIS.

5 Although every feature is styled, for use as a contextual map we recommend the following layer order and visibility:
